Manhattan

Manhattan T3·R v1.08 Release Notes (22/07/20)

Resolved

- An issue introduced in 1.07 affecting A/V decoding that could cause the T3·R to crash. ITV Hub was particularly affected.

- After the T3·R had been on for more than 48 hours the internet could stop working until you went to the Internet Settings menu or restarted the T3·R.

- The T3·R could be unexpectedly found on in the morning (we've resolved one issue but are aware that there is another still causing it for some customers).

- When playing back a recording or in live pause, subtitles could sometimes fail to turn on or take up to 30s to turn on.

- The system could incorrectly delete old recordings even though free space was available.
